

Price Action Analyzer

Symbol	Name	Type	Description
 Up Triangle (Cyan)	"Spring"	<i>Entry</i>	This is a price action bar. Most effective in an established trend or during accumulation. As price action breaks further into the direction of the trend, price reverses and closes at the other side of the bar. For example, price makes new lows in a downtrend, then closes at the top half of the bar ("Spring") indicating that buyers may be taking control. Opposite situation for "Up Thrust". These signals are filtered for trend and size of bar.
 Down Triangle (Cyan)	"Up Thrust"		
 Up Triangle (Light Cyan)	"Spring (unfiltered)"	<i>Entry</i>	Same as "Spring / Up Thrust", except the size of the bar doesn't matter and trend bias is not filtered.
 Down Triangle (Light Cyan)	"Up Thrust (unfiltered)"		
 Up Triangle (Blue)	"Spring (w/Volume)"	<i>Entry</i>	Same as "Spring / Up Thrust", with added above average volume, showing interest in new price direction. Confirm signal with break of the high ("Spring") or low ("Up Thrust").
 Down Triangle (Blue)	"Up Thrust (w/Volume)"		
 Up Triangle (Yellow)	"No Supply"	<i>Entry</i>	Falling/Rising on low volume. <i>Note that these low volume moves are very common!</i> Look for a pullback within an established trend, then look for "No Supply" to keep going higher (in an uptrend) or "No Demand" to keep going lower (in a downtrend). Filtered for trend bias and potential accumulation.
 Down Triangle (Yellow)	"No Demand"		
 Up Triangle (Orange)	"No Supply (unfiltered)"	<i>Entry</i>	Falling/Rising with less volume. Similar to "No Supply / No Demand", with no filters. Only use in confirmed trends without any signs of accumulation. <i>Only use with full understanding of price action concepts!</i>
 Down Triangle (Orange)	"No Demand (unfiltered)"		
 Diamond (Lime)	"Effort To Rise"	<i>Support and Resistance</i>	Falling/Rising on above average volume while breaking the current trend. Price action suggests the establishing of a position by traders to potentially start a new trend campaign. This bar portends a higher probability that a swing low or high has been made.
 Diamond (Red)	"Effort To Fall"		
 Square (Red)	"Stopping Volume 1" (uptrend / downtrend)	<i>Trend Reversal</i>	Very high buying volume reversal bar after a long up/down trend. Potentially indicates the end of the trend.
 Square (Maroon)	"Stopping Volume 2" (uptrend / downtrend)	<i>Trend Reversal</i>	High buying volume reversal bar after a long downtrend. Potentially indicates the end of the downtrend.
 Square (Pink)	"False Breakout" (uptrend / downtrend)	<i>Trend Reversal</i>	After price breaks further into the direction of the trend, the next bar reverses on higher volume. May indicate that price was rejected and a change of trend could be coming.
Blue Bars (default)	"Hidden Gap Bars"	<i>Sup/Demand Change</i>	Where the bar before it and the bar after it do not intersect each other. Thus, the creating a "gap". Often you'll see these "gaps" filled, or if the bar is large, sometimes only to the middle of the bar.
Hollow up/down arrows	"Inside" and "Outside" Bars	<i>Seeking Value</i>	<i>Inside:</i> Lower high and higher low than previous bar. <i>Outside:</i> Higher high and lower low than previous bar. Looking to find value. Focus on sticking with larger trend.
